Riassunto	iii
Introduction	1
1 Preliminaries and auxiliary results	13
1.1 Recall on semigroups theory	13
1.2 Sectorial operators	14
1.2.1 Perturbation of sectorial operators	17
1.3 Analytic semigroups and spaces $D_A(\theta, p)$	18
1.4 Preliminaries of measure theory	20
1.4.1 Weak convergence of measures	22
1.4.2 Differentiation of measures	23
1.4.3 Hausdorff measures and rectifiable sets	24
1.5 Some further preliminaries	24
2 Generation of analytic semigroups by elliptic operators	29
2.1 Assumptions and formulation of the boundary value problem	29
2.2 Basic estimates for elliptic equations	31
2.2.1 Analytic semigroups in $L^p(\mathbf{R}^n)$, $1 < p < \infty$	33
2.2.2 L^p -estimates on domains	38
2.3 Generation of analytic semigroup in $L^\infty(\Omega)$ and in the space $C(\overline{\Omega})$	44
2.4 Elliptic boundary value problems in some Sobolev spaces of negative order	50
2.4.1 Formally adjoint boundary value problems	51

2.5	Generation of analytic semigroups in $L^1(\Omega)$	58
3	Estimates of the derivatives of solution of parabolic problems in $L^1(\Omega)$	63
3.0.1	Estimates of first order derivatives	63
3.1	Estimates of second order derivatives	65
3.1.1	Characterization of interpolation spaces between $D(A_1)$ and $L^1(\Omega)$	69
4	BV functions and parabolic problems: the first characterization	73
4.1	The space BV : definitions and preliminary results	73
4.1.1	Sets of finite perimeter	75
4.2	Weighted BV functions	76
4.3	A first characterization of BV functions	83
5	BV functions and parabolic problems: the second characterization	93
5.1	The heat kernel in \mathbf{R}^n	94
5.2	Preliminary results for problems in a domain	100
5.3	A second characterization of BV functions	104
A	A brief introduction to interpolation theory	113
A.1	Interpolation spaces	113
A.1.1	Some interpolation estimates	114
A.2	Real interpolation spaces	115
A.2.1	Examples	116
A.3	Complex interpolation spaces	121
B	Heat kernel estimates on domains	125
Appendix B	Heat kernel estimates on domains	125
B.1	Gaussian upper bounds for heat kernels	126
B.1.1	Some norm estimates	126
B.2	Gaussian lower bounds	127
B.2.1	The symmetric case	128
B.2.2	The non-symmetric case	130
